What Do We Do?

Through our asset tracking solutions, Auto Assist provides real-time visibility and metrics to improve our customer's efficiency, scalability and profitability. We help people keep track of where their assets are, how they are doing with a combination of location and condition monitoring devices configured to suit their needs

Airfinder Onsite

The Real-Time Location System (RTLS) utilizes patented technology to track items in warehouse or campus environments, both indoors and outdoors. It boasts long battery life and provides sub-meter accuracy.

Airfinder Everywhere

Indoor/outdoor asset tracking solution to track items that move between geographical locations

IoT Platform

Users have access to our comprehensive AirFinder IoT platform to seamlessly visualize asset location and other sensor information

Key Differentiators

Unprecedented location capabilities

Massive use case extensibility

Lowest cost in all respects

Comprehensive enterprise grade capabilities

Auto Assist powered by AirFinder

Global Leader in Location Services Technology

The integration of Auto Assist asset tracking technology marked a turning point. With real-time asset visibility, our clients can now proactively monitor their entire fleet, optimize routes in response to dynamic conditions, provide precise delivery timelines to customers, and so much more. This heightened level of asset tracking enabled our clients to minimize delays, prevent loss or theft, enhance inventory management, and improve customer satisfaction.

Track . Investigate . Recover

Where Security Meets Innovation

Elevating vehicle security to unparalleled levels, Auto Assist partners with one of the world's most renowned GPS tracker, AirFinder. Our collaboration ensures a cutting-edge approach to safeguarding your assets. With a robust network of private investigators, such as Investigative Risk Management and Westbridge Ventures Canada, law enforcement, bailiffs, and sheriffs spanning the globe, we offer comprehensive protection for your vehicle, from local streets to international borders. By seamlessly integrating AirFinders' GPS tracking technology with our extensive support system, Auto Assist guarantees the swift and secure containment of your vehicle until legal recovery is achieved. Our commitment to transparent communication ensures that critical evidence and intelligence are relayed promptly, providing you with unmatched peace of mind and confidence in the protection of your valuable

Our Advantages

2 billion+ IoT location and sensing events per month

29 US patents + international

250,000+ infrastructure devices deployed and managed

Core products: AirFinder OnSite and AirFinder

Deployed to 1,200+ customer sites

Why Choose Auto Assist?

VEHICLE TRACKING

HEAVY EQUIPMENT

CARGO TRACKING

FLEET TRACKING

LOSS PREVENTION

Integration

Auto Assist provided the ability to integrate with the company's existing telematics platform which made the data transition extremely simple.

Affordability

AirFinder found a balance between providing a quality solution while remaining affordable. Going through thousands of tags each month gets expensive, but the Everywhere solution found the sweet spot between price and effectiveness.

Visibility

The AirFinder solution provided complete visibility of the logistics company's non-powered assets. It also had the ability to provide insights into different asset condition metrics such as temperature, shock, and humidity.

IT Independent

There were no security concerns due to the safety of Auto Assist network and its ability to operate independently.

Loss and Theft Prevention

Tracking the non-powered assets in the fleet prevented any theft or loss from occurring. By adding the extra layer of support, the company was able to take a proactive approach.

Global Reach, Local Expertise

Securing Your Vehicle With Precision & Speed

Asset Tracking

With Enhanced Visibility

Auto Assist is a cutting-edge asset tracking system designed for the automotive industry. It employs advanced technologies like IoT devices, wireless networks, and analytics platforms to provide real-time data access and insights. SuperTag Plus devices on vehicles capture data, while Eg puck tags extend coverage around trailers. The system enables seamless communication over long distances and delivers detailed reports through a telematics interface, facilitating data-driven decisions for logistics optimization.
